

MyMiniFactory BE Exercise: Cart & Checkout

The application should allow admins to add/edit/remove products and assign credits to users. Products should have a name, description, price and the date that were added.

The application should allow users to add products to their carts and checkout if they have enough credits.

[Clarifications]

- Use Symfony 4 and MySQL

- You can use any technology to display the information on the front-end

[Bonus points]

- The application should allow admins to set different sizes variants (i.e. small, medium, big) on each product

- The application should allow users to login and register

- The application should send an email to every product's owner once the purchase is completed

- The application should allow users to add product quantities on their carts

- The application should allow users to search products
